

Labelling Solutions for Public Sector

Introduction

With government data leaks never far from the headlines, it's a real concern that protectively marked emails or documents may escape classification or, worse still, leak out into the public domain by accident. Manual procedures and document templates are a common solution, but the application of labelling technology at the creation of mail and documents can drive the enforcement of policy and make life easier for the user.

SAFEmail ICS Edition

Boldon James SAFEmail ICS Edition makes it simple for a user to classify emails and provide additional visual indicators that will highlight the protective marking to recipients of protected mail, encouraging better recognition and awareness. Once users have marked the mail appropriately, the administrator created rules then ensure that only authorised recipients may be sent a protectively marked mail.

Preventing inadvertent disclosure

If a document is protectively marked and this marking is higher than that of the email it is attached to, then SAFEmail can recognise the markings, notify the user and if policy dictates, force the user to upgrade the classification of the email. This provides an easily-adopted safety net which prevents the accidental release of protectively marked material due to 'auto-complete' type errors when addressing mail or other inadvertent disclosure.

Enhance other security technologies

Boldon James SAFEmail and SAFEoffice software integrates seamlessly into Outlook and MSOffice to enforce accurate marking of mail and documents. Having gained consistency in your data classification, you can then get the most from other technologies such as content management, archiving and encryption. The message/document metadata we produce can be used to predictably and reliably trigger a further product's rule-set for automated action.

About Boldon James

For over 20 years we have helped organisations with the most demanding and complex communication requirements manage sensitive information securely and in compliance with legislation and standards. Our solutions extend the capabilities of Microsoft core infrastructure products to allow secure information exchange and in 2006 we were elevated to Microsoft Global Go-To-Market Partner. Boldon James is a wholly-owned subsidiary of QinetiQ, with offices in the UK, US, Australia and Europe, and channel partners worldwide.
