

Boldon James Supports NATO Messaging Infrastructure at CWID 2007

Demonstrating ACP 145 Gateway, SAFEmail V3 and X.400 Bridgehead components with Windows Vista and Exchange 2007

Maidenhead, Berkshire, U.K. – 11th May 2007

Boldon James, a leading provider of Secure Formal Messaging solutions has been invited to attend the NATO Coalition Warrior Interoperability Demonstration in June 2007 (CWID 07) based in Lillehammer, Norway.

Building on our previously demonstrated technology, Boldon James will provide key components of the NATO messaging infrastructure demonstration. NATO will utilise our SAFEmail platform for messaging during the operation and will communicate with allied partners using our ACP145 gateway.

Boldon James' innovations for CWID 2007 will include the demonstration of our capability to support the latest Microsoft products including Microsoft Windows Vista platform with SAFEmail V3 messaging client and Microsoft Exchange Server 2007 as a messaging platform. The Exchange 2007 servers have been extended with Boldon James X.400 Bridgehead component to communicate with third-party X.400 Message Transport Agents.
