

## **Boldon James Military Message Handling Training Course**

*The growing success of the Boldon James Military Message Handling System (MMHS) Training courses demonstrates leadership in the Secure Formal Messaging Market*

Maidenhead, Berkshire, U.K. – 20<sup>th</sup> September 2007

Boldon James, a leading provider of Secure Formal Messaging solutions, today announces the completed delivery of another MMHS training course for a new Eastern European customer. Building on previously delivered courses Boldon James has successfully gained another partner who has recognised the benefits of our training solutions and our deep understanding of secure formal messaging solutions.

With our expertise in MMHS, Boldon James has developed a range of training solutions to help those organisations engaged in the design, development or delivery of an MMHS. The course components provide a structured introduction to Military Message Handling Systems and then examine the individual elements, these include:

- Military Forms
- Security Modules (digital signatures and encryption)
- Directories (ACP133)
- Content labelling (enable content/recipient checking)
- Profiling
- Assured messaging delivery (fire and forget)
- Gateways and guards
- Workflow processes (draft and review)
- STANAG 4406 Annex E (Tactical Messenger)

Courses are delivered as instructor led sessions and as practical workshop sessions allowing the students to practice the new skills they have learnt with the assistance of Boldon James specialists. The courses can be tailored to provide high level architectural design overview information through how to configure and install Boldon James suite of products.

With a growing pipeline of further opportunities Boldon James have once again demonstrated a thorough understanding of the market opportunities within the sectors it serves.
